UCID: 30171638

Requirements

Before compiling and running the application, ensure that you have:

- Java Development Kit (JDK) installed on your system.
- The required JAR files placed in the lib folder within the project directory.

To compile the source code, follow these steps:

- Open a terminal or command prompt.
- Navigate to the project directory.
- Compile the source files using the following command:
 - `javac -cp lib/* edu/ucalgary/oop/*.java`

To run the application:

- Paste the following command into your terminal (assuming you are still in the correct directory):
 - `java -cp "lib\postgresql-42.7.3.jar;" edu.ucalgary.oop.Main`
- This will run the main function, which will give you two options to select from:
 - Accessing the disaster victim entry interface
 - Accessing the inquirer query search interface
